

Chief Architect 3D Viewer

Augmented Reality Surface Marker

If you are having trouble detecting an AR surface on your Android or iOS 12 or newer device:

1. Print the image on the following page.
2. Place the printed marker image on a flat, horizontal surface.
3. In the Chief Architect 3D Viewer app on your device, launch AR.
4. Hover your device over the printed marker pointed downward at a steep angle so it has an unobstructed view.
5. The marker should fill 25% of the device's screen.

When the system detects the image, it will place the model on top of the marker.
